

# LED Replacement Tail Light - Installation

(Part#: 12403.84)

**NOTE:** Because the new LED lights use a larger stud to secure the light assembly, it will be necessary on some models, to enlarge the existing mounting holes using a 5/16 drill bit and drill.

## Step 1:

Disconnect the battery.

## Step 2:

Remove the 2 hex nuts that retain the tail housing.

## Step 3:

Be careful when pulling the tail light wiring through the hole. Disconnect the tail light from the main wiring.

## Step 4:

Using a 5/16" drill bit and drill, open up all mounting holes.

**Caution:** When drilling, use caution not to catch any of the wiring located directly behind the body panel.

## Step 5:

Wire the tail light using the wiring code below.

**Black - Brake / Tail**

**Red - Turn**

**White - Ground**
